Serial No. 10/764,678   Docket No. GTW-0138 (P1263US01)

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application:

Listing of Claims:

1. (Currently Amended) An information handling system, comprising:

a graphical user interface in an operating environment, the graphical user interface
configured to provide at least one display including information related to at least one
channel wherein the display includes a control corresponding with at least one programming
function related to the at least one channel;

wherein the display includes an on-screen display that combines a graphic element
comprising the control with a broadcast streaming video from a second channel;

wherein the graphic element overlays the broadcast streaming video.

2. (Canceled)

3. (Currently Amended) The information handling system of claim 1 wherein the
graphic element comprises a banner overlay includes a current banner and a browse banner
overlaying the broadcast streaming video.

4. (Previously Presented) The information handling system of claim 1, and further
comprising a tuner operably coupled to the graphical user interface, wherein the tuner is
tunable to a plurality of channels including the at least one channel and said second channel.

5. (Original) The information handling system of claim 4 wherein the plurality of
channels includes at least one event.

2

Serial No. 10/764,678   Docket No. GTW-0138 (P1263US01)

6. (Original) The information handling system of claim 1, and further comprising a convergence system operably coupled thereto.

7. (Currently Amended) A medium having executable instructions stored thereon for execution on a suitably equipped electronic system, the instructions for causing the electronic system to perform a method, the method comprising the steps of:

generating a display, wherein the display includes a control related to programming at least one channel combined, the display further including broadcast streaming video from a second channel different than said at least one channel, the control for the at least one channel overlying the broadcast streaming video of the second channel;

accepting an input to the control to program a function related to the at least one channel.

8. (Original) The medium of claim 7 wherein the suitably equipped electronic system includes a convergence system.

9. (Original) The medium of claim 7, wherein the step of generating a display includes the step of generating a banner overlay.

10. (Original) The medium of claim 9, wherein the step of generating a banner overlay includes the steps of generating a current event banner and generating a browse banner.

11. (Previously Presented) The medium of claim 7 wherein the electronic system receives a plurality of channels including said at least one channel and said second channel.

12. (Original) The medium of claim 11 wherein the plurality of channels includes an event.

3

Serial No. 10/764,678   Docket No. GTW-0138 (P1263US01)

13. (Currently Amended) A system, comprising:

means for generating a display, the display including a control for programming at least one function related to at least one channel combined with broadcast streaming video from a second channel different than said at least one channel; and

means for providing at least one prompt in the display, the prompt corresponding with said at least one function related to the at least one channel, the at least one prompt for the at least one channel overlying the broadcast streaming video of the second channel.

14. (Original) The system of claim 13, and further comprising means for selecting the at least one channel from a plurality of available channels wherein the available channels include events.

15. (Previously Presented) The system of claim 13, and further comprising means for receiving inputs for the control related to the at least one channel.

16. (Original) The system of claim 13, and further comprising means for performing the function related to the at least one channel.

4

Serial No. 10/764,678   Docket No. <u>GTW-0138 (P1263US01)</u>

17. (Currently Amended) A method for use with an information handling system, the method comprising the steps of:

<u>generating a video output;</u>

generating a display including information related to at least one channel wherein the display includes at least one prompt<u>, the at least one prompt being displayed over the video output;</u>

~~generating a video output;~~

selecting a browse mode wherein the video output <u>displayed</u> does not correspond with the at least one channel; and

receiving a command in response to the prompt wherein the command corresponds with at least one function related to the at least one channel.

18. (Cancelled)

19. (Previously Presented) The method of claim 17 wherein the step of generating a display includes the step of generating an overlay having a current event banner and a browse banner.

20. (Previously Presented) The method of claim 17, and further comprising the step of receiving a plurality of channels, wherein the plurality of channels includes the at least one and a second channel.

21. (Previously Presented) The method of claim 17 wherein the command corresponds to the programming of said at least one function.

5

22. (New) The information handling system of claim 1, wherein the at least one programming function related to the at least one channel comprises a record function configured to cause a recording device to record an aspect of content on the at least one channel.

23. (New) The information handling system of claim 1, wherein the at least one programming function related to the at least one channel comprises a function related to recording at least a portion of content on the at least one channel.

24. (New) The information handling system of claim 1, wherein the at least one programming function related to the at least one channel comprises adding the at least one channel to a favorite list or deleting the at least one channel from a favorite list.

25. (New) The information handling system of claim 1, wherein the at least one programming function related to the at least one channel comprises changing from a currently selected favorites list to another favorites list.

26. (New) The information handling system of claim 3 wherein the banner overlay includes a current banner including information relating to the at least one channel and a browse banner including information relating to one or more channels that does not include the at least one channel.

6
